10 Writing Tips – Riley Webster

1. Intro needs to be written last; you know everything you need to introduce by then.
2. Keep figures lean and make the result as clear as possible. The caption should give the reader most of, if not all that they need.
3. Write the paper like you're writing a story.
4. Be specific and precise with your method, if you're making cuts to your data, please say how cuts are made!
5. When introducing results, connect them to the aim of the research.

10 Writing Tips pt 2 – Riley Webster

6. I like trying to communicate my results with a physical interpretation or through an analogy with an idea that is more familiar.
7. I like to list my conclusions with a numbered list, with number one being the most pertinent.
8. Paragraphs are their own little subsections that all come together to make the main point of the actual subsection.
9. Minimise the use of acronyms unless the phrase is ubiquitous in your writing.
10. From the article, I also dislike the use of the ambiguous ‘this’, especially in the methods section.
11. Extra, version control is awesome, git integration with Overleaf works really well.
